

Letter of Recommendation for Prakash Teki

To Whom It May Concern,

I am pleased to write this letter of recommendation for Prakash Teki, who has served as a Teaching Assistant under my supervision at the University of North Texas. I have had the opportunity to closely observe Prakash's work ethic, technical abilities, and commitment to both academic excellence and student engagement over multiple semesters.

In his role as a Teaching Assistant, Prakash has consistently demonstrated a strong grasp of data analytics tools and concepts. He currently leads two Excel Analysis lab sessions each week, where he effectively explains technical concepts and engages students with clarity and patience. In the previous semester, he conducted lab sessions on Tableau, making complex data visualizations approachable and understandable for undergraduate students. I have witnessed his teaching firsthand and can attest to his ability to communicate technical material in a way that resonates with students.

Prakash currently supports over 350 students and is instrumental in managing and resolving their technical queries. What sets him apart is his proactive approach to teaching and grading. He has implemented automation strategies to streamline grading workflows and frequently contributes innovative ideas to enhance the student learning experience.

Beyond the classroom, Prakash serves as the Communications Director of the ITDS Cybersecurity Club, for which I also act as faculty advisor. In this role, he manages the club's operations, contributes to technical documentation, data analysis, and marketing efforts, and even leads sessions introducing cybersecurity fundamentals during general body meetings. His leadership, creativity, and initiative have significantly contributed to the club's growth and outreach.

Prakash is a reliable, intelligent, and forward-thinking individual. I am confident he will be an asset to any organization seeking a candidate with a blend of technical proficiency, teaching experience, and leadership in both academic and extracurricular domains. I strongly recommend him for internships or full-time opportunities in Business Analytics or Data Analytics.

Please feel free to contact me if you need further information.

Sincerely,

Pathak Jogen
Teaching Faculty & Cybersecurity Club Advisor
University of North Texas
