PROFESSIONAL SUMMARY

Data Analyst with 4+ years of experience analyzing large-scale healthcare and operational datasets using Python (Pandas, NumPy) and SQL. Expertise in exploratory data analysis, data quality auditing, and ETL/ELT pipeline development to transform complex, multi-source data into clear, actionable insights. Proven ability to document workflows, gather stakeholder requirements, and build Power BI visualizations that support data-driven decision-making in fast-paced environments

EDUCATION

Master of Science in Business Analytics (3.9/4.0) **January 2024 – December 2025**

University of North Texas - G. Brint Ryan College of Business

PROFESSIONAL EXPERIENCE

Wisdom Index Advisors – Financial Data Analyst **Aug 2025 – Dec 2025**

- Designed and deployed a **PostgreSQL cloud database** featuring 37+ financial metrics, successfully migrating the firm from manual Excel workflows to a centralized database architecture.
- Developed SQL queries and stored procedures to calculate lifetime value and financial KPIs, reducing client lookup time by 70%.
- Implemented a full-stack AI-driven analytics app (React/Flask), reducing manual excel review time for the CEO by 80%.
- Built interactive dashboard with **embedded AI** summary **agent** that analyzes client's current financial position and suggests actionable steps to achieve metric goals, providing CEO with data-driven performance insights

University of North Texas – Research Data Analyst **Feb2024 – Aug 2025**

- Analyzed 3M+ records of healthcare administrative data in Python and Power BI to support logistics decision-making for kidney transplantation, performing exploratory data analyses, evaluating data usability, and building dashboards that translated complex findings into clear visualizations for stakeholders.
- Executed geospatial analysis in Jupyter notebooks across 4,128 healthcare facilities, documenting data workflows and identifying data quality issues and limitations — developing workarounds to ensure analytical integrity across all 50 U.S. states
- Applied statistical models (logistic regression, outlier detection) using scikit-learn and Python to identify key factors in healthcare outcomes, documenting business requirements and analytical assumptions gathered through stakeholder meetings

Accenture - Data Analyst **Nov 2021 – Dec 2023**

- Provided analytics support using SQL and Python, performing routine data audits to flag quality issues and developing reports to monitor data coverage and accuracy resolving 50+ escalated data issues daily through structured investigation and workaround development
- Assisted in the development and maintenance of ETL/ELT pipelines for OLTP and OLAP databases, writing Python data processing scripts with exception handling to expected patterns and ensure data usability across large-scale datasets.
- Designed **star schema** models in **Snowflake** for financial reporting, improving query **performance** by 25% while implementing security protocols and role-based access controls
- Developed **Random Forest** classification model for customer churn prediction (83% accuracy), documenting model logic
- Optimized complex SQL queries (CTEs, window functions) for ETL processes, improving data retrieval performance by 20% while ensuring data accuracy and documenting workflows to identify inefficiencies and error-prone areas

PROJECTS:

Large-Scale Healthcare & E-Commerce EDA | Python, Pandas, NumPy

- Conducted exploratory data analysis on datasets exceeding 500K+ records using Python (Pandas, NumPy), profiling schema, evaluating data usability, and performing missing value analysis identifying 90%+ null rates in key fields and documenting data quality recommendations.
- Built reusable Python utility functions to automate schema inspection and data validation across multiple large datasets, enforcing expected data patterns and handling exceptions to ensure analytical integrity before reporting.

Adidas Sales Performance Analysis | Tableau | SQL

- Developed end-to-end sales analytics solution using Tableau to analyze 9,000+ Adidas transactions, implementing calculated fields and parameters to track regional performance, product category profitability, and sales channel effectiveness, uncovering that online sales grew 45% YoY while retail locations showed 12% decline

Earthquake Data Engineering ELT Pipeline | Microsoft Fabric

- Built an end-to-end data engineering pipeline on Microsoft Fabric using medallion architecture (Bronze → Silver → Gold) to ingest real-time data from USGS API.
- Developed PySpark notebooks for data ingestion and quality validation, creating Power BI dashboards to visualize global patterns.

E-commerce ETL Pipeline | Databricks & PySpark

- Developed an ETL pipeline on Databricks using medallion architecture to transform 10K+ transactions into analytics-ready tables.
- Performed dimensional modeling across 6 data layers to support Business Intelligence reporting and trend analysis.

CERTIFICATIONS:

- Microsoft Certified: Power BI Data Analyst Associate (PL-300) [LINK]
- Microsoft Certified: Fabric Analytics Engineer Associate (DP-600) [LINK]

SKILLS

- **Databases & SQL**: PostgreSQL, Snowflake, Advanced SQL (CTEs, Window Functions), Query Optimization
- **Programming & Cloud**: Python (Pandas, NumPy, sqlalchemy, scikit-learn), SQL, PySpark, R, Azure, AWS, Databricks, APIs
- **Machine Learning & AI**: Regression, Random Forest, Clustering, Scikit-learn, NLP, LLMs (GPT-4), Prompt Engineering
- **Data Engineering**: ETL Pipelines, Medallion Architecture, Apache Spark, Data Modeling (Star Schema)
- **BI & Reporting**: Power BI, Tableau, Dashboard Design, Executive Reporting, KPI Development
- **Analytics & Business**: Exploratory Data Analysis (EDA), Data Quality Auditing, Descriptive Analysis, Outlier Detection, Statistical Modeling (OLS, Logistic Regression, Sampling), Forecasting, Root Cause Analysis, Healthcare Data Analysis
- **Dev & Product Tools**: Git (Branching, Pull Requests, Version Control), GitHub, Jira, ServiceNow, Power Apps, Microsoft Visio
